Offering the Best of Both Worlds

3M FX High Performance

Automotive Window Film offers

outstanding solar performance with

a sleek charcoal finish.

Hybrid Dyed Film & Metallized Film
Technologies Offer Excellent Performance and
Value, with a Lifetime Warranty

3M™ FX High Performance Automotive Window Films

Stay Cool

3M's FX High Performance Automotive Film offers maximum heat rejection, and protection from the sun's heat and ultraviolet rays. The hybrid technology behind these films provides outstanding solar protection. FX High Performance rejects up to 50% of the total solar energy coming through your windows, providing a 'cool effect' in more ways than one.

Superior UV Protection

Blocking 99 percent of UV light, 3M FX High Performance Automotive Window Films provides vehicle occupants with significant protection from the dangers of the sun's UV rays, including sunburn, causes of premature aging, and the risk of more serious skin conditions.

Reduces Glare

3M FX High Performance Automotive Window Films significantly reduce glare from blinding sunlight, allowing you to see better and concentrate more on driving. FX High Performance films are available in a variety of tint levels to meet your needs, allowing 20% to 50% of the visible light into your vehicle.

Limited Lifetime Warranty

Selecting 3M Automotive Window Films gives you peace of mind. That's because we have one of the most comprehensive warranties you can get. 3M FX High Performance Automotive Window Films are backed by a limited lifetime warranty should your window film need replacing from bubbling, peeling or blistering. 3M Automotive Window Films are durable, designed to last and virtually maintenance free. Our films are sold and installed exclusively by professional, 3M Accredited Installers.

The 3M Difference

Improving comfort, protecting vehicle interiors and the people who occupy them is a hallmark of 3M Automotive Window films. 3M invented window films in 1966 and our innovative window film products have provided protection from the sun's harmful rays for more than 45 years. Put the innovation of 3M to work for you.

There are thousands of window film dealers in the country, but only a select few have been chosen to be part of the 3M network. Our 3M Accredited Installers are available to help solve problems such as excessive heat and glare in your vehicle.

visible light transmitted

The percentage of visible light that passes directly through filmed glass: the higher the number, the lighter the film.

total solar energy rejected

The percentage of total solar energy rejected by filmed glass. The higher this value, the less solar heat energy is transmitted by the glass.

visible light reflection

The percentage of visible light reflected back from the glass.

uv rejection

The percentage of ultraviolet light that is rejected by filmed glass. Ultraviolet light contributes sunburn and other harmful skin conditions from the sun and to the fading and deterioration of fabrics and leather.

glare reduction

The percentage by which visible light is reduced by the addition of film.
